

2nd Jóannes Rasmussen Conference

- Evolution of basaltic provinces 5-6th May 2015

Drilling Volcanics

- Conference on drilling in basaltic provinces 7th May 2015

2nd Jóannes Rasmussen Conference Evolution of Basaltic Provinces

Jarðfeingi is delighted to announce that the 2nd JRC conference we will be held in May 2015. The conference will be held in Tórshavn, surrounded by some of the youngest lava flows of the Faroe Islands Basalt Group, new observations and ideas shall be presented covering aspects of how basaltic provinces evolve during their lifetimes. During two days, oral presentations shall be given in a relaxed and informal atmosphere with ample opportunity for discussion. In addition, technical posters shall be on display throughout the conference. The two days will be separated into four sessions, each with an invited keynote speaker. The following topics have been suggested for presentations, but this is not a definitive list and we welcome other suggestions:

- Geochemical evolution
- Emplacement Processes
- Timing of events
- Origin of Large Igneous Provinces

Pre-Conference Field Trip Geology of the Faroe Islands Basalt Group (FIBG)

The conference field trip will be organized by Jarðfeingi. Details regarding this field trip will be presented in November 2014.

Drilling Volcanics A Conference on Drilling in Volcanic Provinces

During the last two decades we have seen an increasing number of wells being drilled through volcanic units. The aim of this conference is to create a forum for oil and service companies as well as others that have experience with drilling in basalt to present and discuss the challenges that occur when drilling a heterogenic volcanic basalt package. We are planning to invite speakers from oil- and service companies with experience in drilling volcanics basalts to tell us what they have learned.

Post-Conference Field Trip Large scale geological variations in the FIBG

The conference field trip will be organized by Jarðfeingi. Details regarding this field trip will be presented in November 2014.
